

Evolution Evidence Project

You will be researching examples of evolutionary evidence in one of the following areas: **fossils, anatomy, embryology (development), biochemistry (molecular biology), and biogeography**. You will create a detailed list of 3 examples for your piece of evidence and present your findings in a Keynote.

- Provide a summary of the description of your piece of evidence on 1-3 slides: read book first and then research additional information online
- Prepare one slide for each of your 2 examples of your piece of evidence
- Include at least 4 pictures throughout your Keynote
- Include one slide of your resources: full websites

Grading Rubric

Evolutionary Evidence Name = _____	Points Possible	Points Earned
• THROUGH bullet point description of your piece of evidence	40	
• List 2 relevant examples in for your piece of evidence and describe each example completely and thoroughly	30	
• Includes 4 pictures	10	
• Notes from other group members pieces of evidence examples	20	

Total = 100

*****If references are not listed, then it will result in a grade of zero*****
